Recap of Cosine Similarity in Embeddings

In-Class Exercise 1 on Cosine Similarity - Work in groups of 3

Let's reference back to the last lecture. Let's consider three dimensional embeddings for movies. Say we have 3 movies: Avatar, Ironman and Rainman. Given that you like Avatar, which movie would be good to recommend between Ironman and Rainman and why? Use the concept of embeddings and cosine similarity to derive your result.

Let's say Avatar's embedding is $e_1 = [1, 2, 2]$, Ironman's embedding is $e_2 = [3, 7, 8]$ and Rainman's embedding is $e_3 = [1, -2, 6]$.

Word2Vec

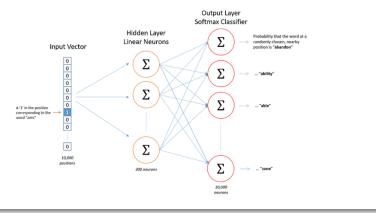

Skip Gram Model

Is based on the skip-gram model! How is training done? It's semi-supervised!!

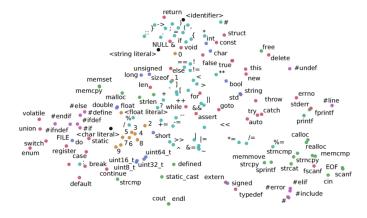

Source Text	Training Samples	
The quick brown fox jumps over the lazy dog. \Longrightarrow	(the, quick) (the, brown)	
The quick brown fox jumps over the lazy dog. \Longrightarrow	(quick, the) (quick, brown) (quick, fox)	
The quick brown fox jumps over the lazy dog. \Longrightarrow	(brown, the) (brown, quick) (brown, fox) (brown, jumps)	
The quick brown fox jumps over the lazy dog. \Longrightarrow	(fox, quick) (fox, brown) (fox, jumps) (fox, over)	

Word2Vec

Architecture

Word2Vec representation

What do the embedding dimensions of word2vec represent?

- Fixed words decided by word2vec
- Opics that are common among the words
- Parts of speech of the words (nouns, adjectives, etc)
- Book titles that these words came from

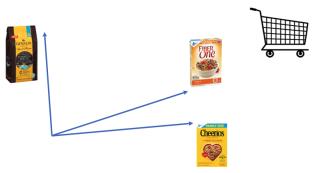

Product2Vec

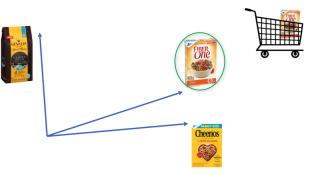

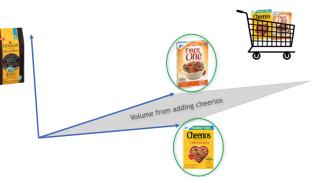

Represent products in product space with a large matrix of embedding coordinate vectors "L"

		3 11				1
L =	(1.5) 0.6 0.6 0.6 0.8	$1.9 \\ 0.1 \\ 1.6 \\ 1.0 \\ 1.4$	$1.8 \\ 1.0 \\ 1.6 \\ 0.1 \\ 1.9$	$1.4 \\ 1.6 \\ 1.6 \\ 1.6 \\ 0.8$	· · · · · · · · · · ·	$\begin{pmatrix} 0.4 \\ 1.9 \\ 1.8 \\ 0.6 \\ 0.7 \end{pmatrix}$

We obtain these embedding vectors from the <u>Product2Vec</u> service [London et al, 2017]

Breakout 1: Discuss your favorite X2Vec!

X2Vec

In your group - Discuss an application that requires machine learning. Be specific about it - Example, data, features, the type of problem (classificaiton, clustering, etc). Can you see how X2Vec would benefit your application. What would be your X in this case? How would you learn X2vec for your application? And how would you use it?

Let's list out some X's in X2Vec!

Generating Sentence Embeddings from Glove

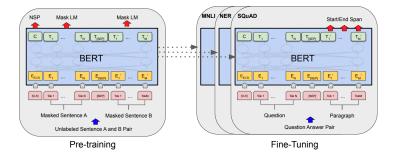

Averaging embeddings of words: If we have a word embedding, how do we generate the sentence embedding?

Generating Sentence Embeddings from Glove

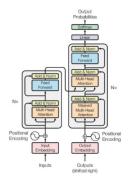

Averaging embeddings of words: If we have a word embedding, how do we generate the sentence embedding?

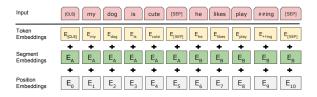

Simple Solution: Just average the word embeddings

BERT - Bi-directional Encoders from Transformers

BERT Embeddings

(Univ. of Washington, Seattle)

BERT pre-training

Two Tasks

- Masked LM Model: Mask a word in the middle of a sentence and have BERT predict the masked word
- Onext-sentence prediction: Predict the next sentence Use both positive and negative labels. How are these generated?

BERT pre-training

Two Tasks

- Masked LM Model: Mask a word in the middle of a sentence and have BERT predict the masked word
- Onext-sentence prediction: Predict the next sentence Use both positive and negative labels. How are these generated?

ICE: Supervised or Un-supervised?

• Are the above two tasks supervised or un-supervised?
